SUMMARY

Data Science and Analytics Engineer with 3 years of experience in demand forecasting, causal inference, and applied ML/LLMs - cutting forecast error 18% and building a RAG pipeline for data mapping.

Certifications: Tableau Desktop Specialist, Microsoft AI-900, AWS CLF-C02, DataCamp: Data Scientist Associate & SQL Associate

Languages & Libraries: Python, SQL, PySpark, Scikit-learn, XGBoost, LightGBM, CatBoost, PyTorch, EconML, SHAP, Pandas, NumPy, DuckDB

AI, MLOps & Platforms: Amazon Web Services, Microsoft Azure, Snowflake, Databricks, MLflow, Power BI, Tableau, Looker, Google Data Studio, Git, LangGraph, Large Language Models, Retrieval-Augmented Generation, QLoRA, PEFT, LangChain, AWS Sagemaker, dbt, Apache Airflow, BigQuery, Relational Database, NoSQL, Power Automate, Microsoft Excel.

Methods & Domain: Machine Learning, Causal Inference, A/B Testing, Experiment Design, Time-Series Forecasting, Exploratory Data Analysis (EDA), Regression Analysis, Deep Learning, Explainable AI, Data Visualization, Data Pipelines (ETL), Process Automation, Root Cause Analysis, Data Modeling, Cross-Functional Collaboration, Stakeholder Communication, Technical Documentation

EDUCATION

Purdue University, Daniels School of Business — West Lafayette, IN
Master of Science in Business Analytics and Information Management, GPA: 3.7/4.0 — August 2025 – July 2026

Sardar Vallabhbhai National Institute of Technology — Surat, India
Bachelor of Technology, Mechanical Engineering, GPA: 3.6/4.0 — August 2019 – May 2023

PROFESSIONAL EXPERIENCE

PartnerLinQ — West Lafayette, IN
AI Analytics Consultant — January 2026 – May 2026

- Cut mapping build time from PartnerLinQ's estimated 3-5 weeks to **3-4 hours** in a proof of concept (POC) by building a **RAG pipeline** over 400+ existing XSLT mappings, with GPT-4.1 tool-calling and Groq routing.
- Presented the team's model comparison to PartnerLinQ leadership: a small in-house Qwen model (QLoRA) reached **68%** first-try Altova validity against GPT-4.1's **78%**, a trade-off that keeps partner data private.
- Led a team of five over 9 weeks, handing engineers the code, report and a **Streamlit test harness** to build a chat assistant.

JCB India Ltd — Pune, India
Analytics Engineer — February 2024 – July 2025

- Gave 10+ users one trusted source for four event streams with an automated **ETL pipeline** on **Databricks**, replacing manual consolidation.
- Kept KPIs clean without manual runs by running **dbt** models and tests through **Airflow** (task dependencies, automatic retries, failure alerts), with failing rows set aside under labelled reason codes.
- Contributed to a **~75% drop** in recurring quality exceptions by ranking functions with **EDA** in Power BI to target engineering fixes.
- Gave engineering and quality the **cause** behind problems on request, pulling an affected item's history across the four streams and checking when it began, so fixes were permanent instead of repeat workarounds.
- Saved **20+ hours a week** of manual reporting by gathering KPI requirements from 3 cross-functional groups and building the Power BI data model, dashboards and KPI documentation for **9 KPIs**, training users along the way.

JCB India Ltd — Pune, India
Data Science Analyst — May 2023 – February 2024

- Led 3 people in moving forecasting from Excel to an **XGBoost** model (500+ SKUs), sending slow-moving SKUs to a trailing annual average, cutting **forecast error 18%** and excess and shortage stock.
- Translated SKU forecasts into monthly demand per component with a Python job, lifting on-time delivery from under 95% to **about 98%**.
- Turned supply surprises into same-day schedule decisions with a daily **production dashboard** for the operations and supply chain standup (quality joined when needed): time-by-time plan, status and alerts for every department.
- Instituted freshness checks that stop stale inputs reaching procurement (est. **$5K-$20K per incident**) and weekly forecast-vs-orders checks.
- Compared scenarios with a **linear optimization model** in Excel with Analytic Solver to reorder urgent sales orders when shortages left 20% of priority orders unfulfilled; operations reworked that week's plan, cutting the figure to **8%**.

Bosch — Nashik, India
Data Analyst (Operational Analytics) — April 2022 – August 2022

- Structured a Pareto data analysis over 9 months of operational time-series data in Python, ranking **140+ exception categories** by frequency to focus the operations team's fixes - projecting a **10% process efficiency** gain.
- Supported the operations team's corrective-action tracking against the ranked categories across procurement, quality assurance, and operations - **exception frequency ~90%** and **reprocessing rate 14%** lower, as reported by the team.

PROJECTS

- **Causal Promotion System -** A campaign attribution tool separating true promotion lift from coincidence, segmenting customers by discount responsiveness using **CATE meta-learners** (Python, EconML, DuckDB) on A/B test data, stress-tested under biased treatment assignment, plus a budget optimizer for targeting spend
- **Customer Churn & Lifetime Value -** A retention prioritization engine scoring 6.7M users on churn risk and lifetime value from **410M log rows**, built on XGBoost/LightGBM (Optuna, ROC-AUC 0.9815) with SHAP and a leakage audit, projecting $1.26M in expected value.
- **Bankruptcy Prediction Ensemble -** A financial risk classifier flagging bankruptcy from 64 financial ratios, combining XGBoost, LightGBM, and CatBoost (Python, Optuna) with leak-free per-fold preprocessing into an ensemble reaching **0.90 validation ROC-AUC**.

AWARDS AND AFFILIATIONS

- Purdue University Graduate Teaching Assistant, AI for Business (Summer 2026)
- Purdue University Undergraduate Teaching Assistant, Six Sigma (Spring 2026)
- JCB - Excellence in Planning and Efficiency (2025), Rising New Joinee Award (2024)
- Indian Institute of Management Ranchi - Research Intern, Market & Competitive Analysis of EV Landscape (2022)
